Dear George, 7/8/81

I've marked the enclosed pages up to show you what we spoke about -- that the FBI deliberately did not do and did not make possible any quantitative analyses on the JFK evidence. It was no trick and it had been done for years. In this instance, the effort of the FBI to lie its way out by claiming uncertainty over whether or not it could be done then is destroyed by the 3/27/64 memo which says they are doing a quantitative one with the Tippit evidence.

Realize that this was done, meaning not done, before Oswald was killed or when a trial was expected.

If you have any questions, please ask.

There is much more that they didn't do that they could and should have.

Best,
